11.8×

1

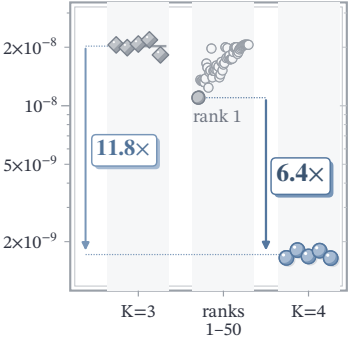

lower raw error than ARC's augmented K=3 at 1024 × 16; the gap opens with width at the 3 and 4 of $c_K(L/n)^K$

6.4×

2

below rank 1's leaderboard raw error (its 50 networks, same shape); full K=4 runs beyond the budget

75× → 15×

3

counted units over the units at which it ties our scored chain: best deletion, then non-tree births as rank-4 pairs
